

“The MPWA will ensure that recommendations are carried forward to decision-makers.”

-IWMP March 2018

The Integrated Watershed Management Plan (IWMP) Steering Committee completed a review of the IWMP for the 2020–2021 fiscal year.

Projects and Education/Outreach initiatives were reviewed to assess alignment with the IWMP. Most aligned with Water quality, Availability away from the Mainstem and Consumptive and just one aligned with Peace River Flow Regime.

Implementation was assessed at the Action level for each Issues of Concern. Overall implementation is progressing commensurate with capacity. The lowest rate of implementation is with the Peace River Flow Regime in part due to complications around jurisdiction and the Wood Buffalo National Park Action Plan.
